

SPECIALIZED PRODUCTS FOR CEMENTITIOUS AND LIME-BASED APPLICATIONS

SUPER PLASTICIZER

Casecrete® PROTEIN POLYMERS

75% SOLIDS
IN EACH MIX AS SHOWN

OPTIMUM WATER MANIPULATION - GREEN SERIES - ZERO VOC'S

CASECRETE® - FOR CEMENTITIOUS AND LIME-BASED APPLICATIONS SEEKING TO IMPROVE POUR, WATER REDUCTION, OPEN TIMES, WORKABILITY AND FINISHING FLEXIBILITY;

CASECRETE® - OFFERS MAXIMUM RAPID SOLUBILITY RESULTING IN COMPLETE REACTIVITY, OPTIMUM WATER MANIPULATION, IMPROVED STABILITY, FEATHERING AND HIGH SOLIDS APPLICATION POTENTIAL.

American Casein Company (AMCO) has manufactured casein protein polymers since 1956. “**CASECRETE PROTEIN POLYMERS**” were developed as a result of AMCO's strategic research & development alliances, quality control & assurance endeavors, and technical assistance efforts with the construction industry.

Multiple functional enhancements, along with finished product property improvements, makes **CASECRETE PROTEIN POLYMERS** the preferred additive for those seeking to simplify their applications. The amphoteric nature of this designer protein polymer allows for both anionic and cationic binding and bonding that can result in superior blend consistency and improved finished strength. **CASECRETE PROTEIN POLYMERS** are virtually “VOC-FREE.” **CASECRETE PROTEIN POLYMERS** are water-soluble powders, pre-solubilized to eliminate any potential off-gassing odors. Significant flow improvements at high solids allow formulations developed with Casecrete™ Protein Polymers access to historically inaccessible areas at higher, more favorable water/cement ratios.

AMCO offers a variety of functional, modified **CASECRETE PROTEIN POLYMERS** to meet your specific needs including: Superior Water-Manipulation, Improved Flow-Heal, Aggregate Stability, Rapid Solubility, Super Plasticizing, Superior Feathering, Freeze-Thaw Protection.
